NetSuite Hackathon 4 Good

On October 16 (World Food Day! 🌍), nine teams of partners and customers put their #NetSuite skills to the test to help Capital Area Food Bank by improving their use of SuiteCommerce Advanced. Capital Area Food Bank uses SCA to ensure Partner Agencies, responsible for distributing food to communities in need, can seamlessly update their address, hours of operation, and more. Now, NetSuite will support a smoother data feed to the interactive map on Capital Area Food Bank's website, allowing families facing food insecurity faster, more reliable, culturally appropriate meals on their tables. 🍽

The solutions brought forward during this Hackathon have the potential to enable Capital Area Food Bank to serve 14,000 more families every year.

WINNING TEAM: Suite Hackers

Adam Smith, *SCS Software Inc.*
Steve Buttitta, *Keena Healthcare Technology*
Cory Anderson, *Cory Anderson Consulting*
Sean Hayes, *SuiteDev*
Dana Larson, *PCF Insurance Services of the West*
Kim Alessi, *Warson Brands*
Ben Washburne, *Equify Advisors*

Two Words

Two Words

Artificial

•Intelligence

Generative AI Text

- New generative AI-powered capabilities help users create contextual and personalized content for any text area in NetSuite based on a few starter words that describe intent. Uses will include benefits in human resources, finance & accounting, supply chain, and operations.
- NetSuite has partnered with Cohere to expand their AI capabilities
- Examples
  - Descriptions on item records
  - Writing explanations for reporting
  - Collections email generation

Available within the next 12 months

Bill Capture

- New AI-powered capabilities help organizations intelligently capture and categorize expenses based on historical data.
- Invoice Scanning
- Automated PO Matching
- Approval Routing

Available within the next 12 months

NetSuite Planning and Budgeting

- New AI-powered capabilities in NetSuite Planning and Budgeting help organizations automate data analysis to improve and accelerate decision making
- With predictive algorithms that continually monitor and analyze plans, forecasts, and variances, customers can quickly and easily uncover and highlight trends, anomalies, and correlations.

Available within the next 12 months

NetSuite Analytics Warehouse

- AI-powered capabilities in NetSuite Analytics Warehouse consolidate and centralize data from a multitude of sources and help organizations accelerate access to data visualizations and reporting.

Available within the next 12 months

Script Development with AI

- Not officially announced
- Recorded demo showed a script being written inside SuiteCloud IDE using generative AI with prompts
- Much like using ChatGPT to generate scripts
